

SIDDARTHA INSTITUTE OF SCIENCE AND TECHNOLOGY:: PUTTUR

Siddharth Nagar, Narayanavanam Road — 517583

QUESTION BANK (DESCRIPTIVE)

Subject with Code: Compiler Design (20CS0516) Course & Branch: B. Tech - CSE

Year & Sem: III B. Tech & I-Sem **Regulation:** R20

UNIT –I INTRODUCTION AND LEXICAL ANALYSIS

| 1 | a | What do you understand by language processor? | [L2][CO1] | [2M] |
|---|---|---|-----------|-------|
| | b | Describe about different language processors used in compiler design | [L2][CO1] | [4M] |
| | c | Give the differences between compiler and interpreter. | [L4][CO1] | [6M] |
| 2 | a | Define compiler. | [L1][CO1] | [2M] |
| | b | Analyse the process of compilation while designing a compiler. | [L4][CO2] | [10M] |
| 3 | a | List all the phases of compiler | [L1][CO2] | [2M] |
| | b | Give the neat diagram of phase of a compiler | [L2][CO2] | [4M] |
| | c | Explain each phase of a compiler. | [L2][CO2] | [6M] |
| 4 | | Design the compiler by using the source program position=intial+rate*60. | [L6][CO3] | [12M] |
| 5 | a | Analyze the reasons for separating the lexical analysis and syntax analysis. | [L4][CO2] | [4M] |
| | b | Illustrate the steps involved in designing the compiler by using the source program a=b+c*10. | [L3][CO3] | [8M] |
| 6 | a | Describe Bootstrapping | [L2][CO1] | [8M] |
| | b | Explain the different applications of compiler technology | [L2][CO1] | [4M] |
| 7 | a | Discuss the Compiler construction Tools | [L2][CO3] | [6M] |
| | a | Differentiate tokens, patterns, and lexeme. | [L4][CO1] | [6M] |
| 8 | a | Explain in detail about the role of lexical analyzer in Compiler Design. | [L2][CO1] | [6M] |
| | b | Write about input buffering? | [L3][CO1] | [6M] |
| 9 | | Discriminate the following terms | [L5][CO1] | [12M] |
| | | a) Specification of Tokens b) Recognition of Tokens | | |

Course Code: 20CS0516

| R20 |
|------------|
| |

a What is LEX [L2][CO3] [2M]
b Explain the working of a LEX Tool [L2][CO3] [6M]
c Give the structure of LEX program [L2][CO3] [4M]

UNIT -II SYNTAX ANALYSIS AND TOP DOWN PARSING

| 1 | a | Explain the role of parser. | [L2][CO1] | [4M] |
|---|---|---|-----------|-------|
| | b | Define Context Free Grammar with example. | [L1][CO1] | [4M] |
| | c | Compare left most and right most derivations with examples | [L4][CO1] | [4M] |
| 2 | a | Define parse tree. | [L1][CO2] | [2M] |
| | b | Construct Leftmost and Rightmost derivation and parse tree for the string 3*2+5 from the given grammar. | [L6][CO2] | [10M] |
| | | Also check it's ambiguity for Set of alphabets $\Sigma = \{0,,9, +, *, (,)\}$ | | |
| | | $E \rightarrow I$ | | |
| | | $E \rightarrow E + E$ | | |
| | | E →E * E | | |
| | | $E \rightarrow (E)$ | | |
| | | $I \rightarrow \varepsilon \mid 0 \mid 1 \mid \dots \mid 9$ | | |
| 3 | a | Define Ambiguity. | [L1][CO1] | [2M] |
| | b | Interpret how to eliminate ambiguity for the given Ambiguous Grammar. | [L3][CO1] | [10M] |
| 4 | a | What is left recursion? Describe the procedure of eliminating Left recursion. | [L5][CO1] | [4M] |
| | b | Eliminate left recursion for the following grammar | [L1][CO1] | [4M] |
| | | $E \rightarrow E + T/T$ $T \rightarrow T * F/F$ $F \rightarrow (E)/id$ | | |
| | c | Show what you understand by Left factoring. Perform left factor for the grammar | [L2][CO1] | [4M] |
| | | A→abB/aB/cdg/cdeB/cdfB | | |
| 5 | a | List the types of Parsers available | [L1][CO2] | [4M] |
| | b | Design the recursive decent parser for the following grammar | [L6][CO3] | [8M] |
| | | $E \rightarrow E + T/T$ $T \rightarrow T * F/F$ $F \rightarrow (E)/id$ | | |
| 6 | a | What is meant by Non-recursive predictive parsing | [L2][CO3] | [2M] |
| | b | Illustrate the rules to be followed in finding the FIRST and FOLLOW. | [L3][CO1] | [6M] |
| | c | Find FIRST and FOLLOW for the following grammar? | [L3][CO2] | [4M] |
| | | E→ E+T/T | 2 22 2 | |
| | | T→T*F/F | | |
| | | $F \rightarrow (E)/id$ | | |
| | | | | |

7 Consider the grammar [L6][CO3] [12M]

 $S \rightarrow AB \mid ABad$

 $A \rightarrow d$

E **→**b

D**→**b | ε

 $B \rightarrow c$

Construct the predictive parse table and check whether the given grammar is LL(1) or not.

Consider the grammar $E \rightarrow TE'$ 8

$$E \rightarrow TE'$$

[L4][CO2] [**12M**]

$$E' \rightarrow +TE' \mid -TE' \mid \epsilon$$

 $T\rightarrow FT'$

 $T' \rightarrow *FT' \mid /FT' \mid \epsilon$

F→GG'

 $G' \rightarrow ^{r} F / \epsilon$

 $G \rightarrow (E) / id$

Calculate FIRST and FOLLOW for the above grammar and

Construct LL(1) Table for the above grammar.

9 Consider the grammar [L6][CO3] [**12M**]

$$E \rightarrow E + T/T$$
, $T \rightarrow T*F/F$, $F \rightarrow (E)|id$

Design predictive parsing table and check the given grammar is LL(1) or not?

10 Discuss the types of errors. [L2][CO2] **[6M]**

Explain Error recovery in predictive parsing with an Example.

[L2][CO2] **[6M]**

UNIT –III BOTTOM UP PARSING AND SEMANTIC ANALYSIS

| 1 | a | Explain about handle pruning | [L2][CO1] | [6M] |
|----|---|---|-----------|-------|
| | b | Summarize about LR parsing | [L2][CO1] | [6M] |
| 2 | a | Describe bottom up parsing | [L1][CO2] | [4M] |
| | b | Differences between SLR, CLR, LALR parsers | [L4][CO2] | [8M] |
| 3 | | Prepare Shift Reduce Parsing for the input string using the grammar $S \rightarrow (L) a \qquad L \rightarrow L, S S$ a. $(a,(a,a))$ b. (a,a) | [L6][CO3] | [12M] |
| 4 | a | Define augmented grammar. | [L1][CO2] | [2M] |
| | b | Construct the LR(0) items for the following Grammar $S \rightarrow L=R / R$ $L \rightarrow *R / id$ $R \rightarrow L$ | [L6][CO3] | [10M] |
| 5 | | Construct SLR Parser for the following grammar $E \rightarrow E+T/T$ $T \rightarrow TF/F$ $F \rightarrow F^*/a/b$ | [L6][CO3] | [12M] |
| 6 | | Construct CLR Parsing table for the given grammar S→CC C→aC/d | [L6][CO3] | [12M] |
| 7 | | Design the LALR parser for the following Grammar $S \rightarrow AA A \rightarrow aA A \rightarrow b$ | [L6][CO3] | [12M] |
| 8 | a | What is YACC parser? | [L1][CO3] | [2M] |
| | b | Explain in detail the processing procedure of YACC Parser generator tool. | [L2][CO3] | [6M] |
| | c | How YACC will resolve the parsing action conflicts and the error recovery. | [L2][CO3] | [4M] |
| 9 | a | Explain syntax directed definition with example | [L2][CO2] | [6M] |
| | b | Define a syntax-directed translation and explain with example. | [L2][CO2] | [6M] |
| 10 | a | Give the evaluation order of SDD with an example. | [L5][CO2] | [6M] |
| | b | Discuss Type Checking with suitable examples. | [L2][CO4] | [6M] |

UNIT –IV

INTERMEDIATE CODE GENERATION AND RUN TIME ENVIRONMENT

| 1 | a | What do you understand by Intermediate Code | [L2][CO5] | [2M] |
|----|---|---|-----------|-------|
| | b | Analyse different types of Intermediate Code with an example. | [L4][CO5] | [10M] |
| 2 | a | List and define various representation of Three Address Codes | [L1][CO5] | [4M] |
| | b | Explain representation of Three Address Codes with suitable Examples | [L2][CO5] | [8M] |
| 3 | | Produce quadruple, triples and indirect triples for following expression: $(x + y) * (y + z) + (x + y + z)$ | [L6][CO5] | [12M] |
| 4 | a | Describe scope and life time of variable. | [L2][CO4] | [2M] |
| | b | Illustrate Control Flow Statements. | [L3][CO4] | [10M] |
| 5 | a | Justify the need for Storage Organization. | [L6][CO4] | [4M] |
| | b | Describe the Storage Organization with simple examples. | [L2][CO4] | [8M] |
| 6 | a | List out the properties of memory management | [L1][CO4] | [4M] |
| | b | Discuss Storage allocation strategies with suitable example | [L2][CO4] | [8M] |
| 7 | | Evaluate the following terms | [L5][CO4] | [12M] |
| | | i. Stack allocation | | |
| | | ii. Static allocation | | |
| | | iii. heap allocation | | |
| 8 | a | Define Activation Record. | [L1][CO5] | [2M] |
| | b | Sketch the format of Activation Record in stack allocation and explain each field in it. | [L3][CO5] | [10M] |
| 9 | a | Discuss about symbol table entries. | [L2][CO4] | [6M] |
| | b | Describe the various operations on symbol table. | [L2][CO4] | [6M] |
| 10 | a | Define Symbol table. | [L1][CO4] | [2M] |
| | b | Explain different types of Data structure used for symbol table. | [L2][CO4] | [10M] |

UNIT -V

CODE OPTIMIZATION AND CODE GENERATION

| 1 | | Interpret the principles of optimization techniques to be considered during code generation. | [L3][CO5] | [12M] |
|----|---|--|-----------|-------|
| 2 | a | Discuss about function preserving transformations. | [L2][CO6] | [6M] |
| | b | Describe about loop optimization technique. | [L2][CO5] | [6M] |
| 3 | | Explain the following i) Basic blocks ii) Flow Graphs | [L3][CO6] | [12M] |
| 4 | a | List the optimization techniques of basic blocks | [L1][CO6] | [4M] |
| | b | Analyse different types of optimization techniques of basic blocks | [L4][CO6] | [8M] |
| 5 | a | Create the DAG for following statement. a+b*c+d+b*c | [L6][CO6] | [6M] |
| | b | Construct the DAG for the following basic blocks | [L6][CO6] | [6M] |
| | | 1. t1:=4*i 2. t2:=a[t1] 3. t3:=4*i 4. t4:=b[t3] 5. t5:=t2*t4 6. t6:=prod+t5 7. prod:=t6 8. t7:=i+1 9. i:=t7 if i<=20 goto 1 | | |
| 6 | a | List out the properties of global data flow analysis and explain it. | [L2][CO6] | [6M] |
| | b | Discuss about machine dependent optimization | [L2][CO5] | [6M] |
| 7 | | Explain the peephole optimization Technique with examples. | [L2][CO5] | [12M] |
| 8 | a | List all the issues in the design of a code generator | [L2][CO6] | [4M] |
| | b | Explain the issues to be handled when code generator is designed. | [L2][CO6] | [8M] |
| 9 | a | Analyse the different forms in target program. | [L4][CO6] | [6M] |
| | b | Explain the target machine in code generator. | [L2][CO6] | [6M] |
| 10 | a | Analyze Simple code generator | [L4][CO6] | [6M] |
| | b | Evaluate Register allocation and register assignment techniques. | [L5][CO6] | [6M] |

SIDDHARTH GROUP OF INSTITUTIONS :: PUTTUR Siddharth Nagar, Narayanavanam Road – 517583 **QUESTION BANK (OBJECTIVE)**

Subject with Code : Compiler Design (20CS0516) Course & Branch: B. Tech - CSE

Year & Sem: III B.Tech & I-Sem **Regulation:** R20

<u>UNIT-I</u>

| 1.A language processor is | s a special type of co | mputer software that | has the capacity of t | ranslato | r for |
|------------------------------|---------------------------|--------------------------|-------------------------|----------|----------|
| translating the | into machine codes. | | | [|] |
| A) Source code | B) Program codes | C) Both A & B | D) 3 address code | | |
| 2. Which of the following | language processors? | | | [|] |
| A) Compiler | B) Assembler | C) Interpreter | D) All the above | | |
| 3.The language processor | that reads the comple | ete source program w | ritten in high-level la | anguage | as a |
| whole in one go and tran | nslates it into an equiva | lent program in machi | ne language is called | a | |
| | | | | [|] |
| A) Compiler | B) Assembler | C) Interpreter | D) All the above | | |
| 4. The is used t | to translate the program | written in Assembly | language into machine | e code. | |
| | | | | [|] |
| A) Compiler | B) Assembler | C) Interpreter | D) All the above | | |
| 5. The translation of a sing | gle statement of the so | urce program into ma | chine code is done b | y a lang | uage |
| processor and executes i | mmediately before mo | ving on to the next line | e is called an | | |
| | | | | [|] |
| A) Compiler | B) Assembler | C) Interpreter D) Al | l the above | | |
| 6. There are parts | in Compiler | | | [|] |
| A) 2 | B) 6 | C) 4 | D) 5 | | |
| 7. The part of the | he compiler breaks up t | the source program int | o constituent pieces a | nd impo | ses a |
| grammatical structure of | on them. | | | [|] |
| A) logical | B) analysis | C) interface | D) synthesis | | |
| 8. The part of | f the compiler constru | acts the desired targe | t program from the | interme | diate |
| representation and the i | nformation in the symb | ool table. | | [|] |
| A) logical | B) analysis | C) interface | D) synthesis | | |
| 9. The first four phases i | s often called the | of the compiler | and last two phases | is calle | d the |
| | | | | [|] |
| COMDILED DECICN | | | | Dago 1 | ■ |

Page 1 COMPILER DESIGN

| | | | | R2 | :O |
|---------------------------------|----------------------------|---------------------------|-----------------------|----------|--------|
| | | | | | |
| A) front end, back end | | B) first pass, second | pass | | |
| C) analysis part, synth | esis part | D) All the above | | | |
| 10. The Compiler has | Phases | | | [|] |
| A) 2 | B) 6 | C) 4 | D) 5 | | |
| 11. The first phase of | a compiler is called | | | [|] |
| A) lexical analysis | B) syntax analysis | C) semantic analysis | D) code generator | | |
| 12. The lexical analyz | er reads the stream of o | characters making up th | ne source program an | d grouj | ps the |
| characters into meaning | gful sequences called _ | | | [|] |
| A) code | B) syntax | C) lexemes | D) program | | |
| 13. In a compiler, key | words of a language are | recognized during (GA | TE 2011) | [|] |
| A) parsing of the prog | ram | | | | |
| B) the code generation | l | | | | |
| C) the lexical analysis | of the program | | | | |
| D) dataflow analysis | | | | | |
| 14. The lexical analysis | is for a modern compute | er languages such as Java | a needs the power of | which o | one of |
| the following mac | hine models is necessary | and sufficient sense. | (GATE 2011 | 1) [|] |
| A) Finite state automa | ta | | | | |
| B) Deterministic push | down automata | | | | |
| C) Non-Deterministic | pushdown automata | | | | |
| D) Turing Machine | | | | | |
| 15. The second phase of | the compiler is syntax a | analysis is also called | | [|] |
| A) code checker | B) tree generator | C) scanner | D) parsing | | |
| 16. The parser uses th | e first components of | the tokens produced by | the lexical analyze | r to cre | eate a |
| represe | ntation that depicts the g | grammatical structure of | the token stream. | [|] |
| A) parse tree | B)syntax tree | C) tree-like intermed | iate D) All the al | ove | |
| 17. The semantic analy | zer uses the syntax tre | e and the information | in the symbol table | to chec | ck the |
| source program for _ | with the langua | ge definition. | | [|] |
| A) syntax | | B) semantic consister | ncy | | |
| C) intermediate repres | entation | D) all the above | | | |
| 18. An important part of | f semantic analysis is | , where the comp | iler checks that each | operate | or has |
| matching operands. | | | | [| 1 |

C) scanner

D) parsing

B) tree generator

A) type checking

C) Actual parameters

| | | Ra | 20 |
|--|---|-----------|----|
| local space? | | [| |
| A) Control stack | B) Access link | L | |
| C) Actual parameters | D) Local Data | | |
| - | ered for the implementation of Activation Record? | [| |
| A) 7 B) 4 | C) 5 D) 6 | L | |
| 35. Properties of memory managers a | , | [| |
| A) Space efficiency | B) Program efficiency | _ | |
| C) low overhead | D) all of the above | | |
| 36. which of the following are opera | tions performed on symbol table? | [| |
| A) allocate ,insert, lookup , set attrib | ute B) get attribute | | |
| C) allocate and free only | D) both A & B | | |
| 37. which of the following is not imp | plementation techniques for symbol table? | [| |
| A) Order linear list | B) Binary Search Tree | | |
| C) Hash Table | D) Static allocation | | |
| 88. Which one of the following are the | he attributes of symbol table? | [| |
| A) scope | B)Data types | | |
| C) names | D)all above | | |
| 39. One of the purposes of using inte | rmediate code in compilers is to | [| |
| A) make parsing and semantic analys | sis simpler. | | |
| B) improve error recovery and error | reporting | | |
| C) increase the chances of reusing th | e machine-independent code optimizer in other co | ompliers. | |
| D) improve the register allocation | | | |
| 40. Pick the machine independent ph | ase of the compiler |] | |
| A)Syntax analysis | B) Lexical analysis | | |
| C) Intermediate code generation | D) all of the above | | |
| | <u>UNIT-5</u> | | |
| is the process of transforma | tion of code to an efficient code |] | |
| A) Compiler | B) Generator | | |
| C) Optimization | D) parse tree | | |
| 2. Determining Common sub express | sion can be done using |] | |
| A) Compiler | B) Interpreter | | |
| C) DAG | D) parse tree | | |

| | | R2 | 0 |
|--|---|---------|--------|
| 2 In DAC the interior nodes are labeled | lhy gymhol | F | 1 |
| 3. In DAG the interior nodes are labeled | | [| J |
| A) Operands C) both A & P | B) operator | | |
| C) both A & B | D) none of these. | г | 1 |
| 4. Graphical representations are | D) DAC | [| J |
| A) triples | B) DAG | | |
| C) postfix notations | D) quadruples | | , |
| 5. Local and loop optimization in turn p | | [|] |
| A)Data flow analysis | B)Constant folding | | |
| C)Peephole optimization | D)DFA and Constant folding | | |
| 6. The process of Move the code from in | | [|] |
| A) Code motion | B) Constant folding | | |
| C) Copy propagation | D) none | | |
| 7. Output of code generator phase in con | npiler design is | [|] |
| A) Source code | B)Intermediate code | | |
| C)Assembly code | D)None of these | | |
| 8. Which of the following is a simple, sy | ystematic technique for allocating registers and manage | ing reg | gister |
| spills. | | [|] |
| A) DAG | B) Graph coloring | | |
| C) A & B | D) none | | |
| 9. One approach tois to assign s | pecific values in the target program to certain registers | . [|] |
| A) register allocation | B) register assignment | | |
| C) register allocation and assignment | D) none | | |
| 10. The transformations that are applied | across the basic blocks is called as | [|] |
| A) Global Optimization | B) Local Optimization | | |
| C) Block Optimization | D) none | | |
| 11. Acronym for DAG | | [|] |
| A) Directed Acyclic Graph | B)Direct Cyclic Graph | | |
| C)Derived Acyclic Graph | D)Deviated Acyclic Graph | | |
| 12. The first statement in basic block is_ | | [|] |
| A) Main Statement | B)Follow | | |
| C)Header | D)Leader | | |
| , | ollows a conditional or unconditional statement is a lea | der | |
| statement. | | [| 1 |
| | | L | J |

| | R20 |
|---|--------------|
| | |
| A) Leader B)Follow | |
| C)Header D)Statement | |
| 14 give a pictorial representation of how values are computed at one sta | atement. [] |
| A) Compiler B) DAG | |
| C) Interpreter D) parse tree | |
| 15. The optimization which avoids test at every iteration is | |
| A)Loop Unrolling B)Loop jamming | |
| C)Constant folding D)None of these | |
| 16. The optimization technique which is typically applied on loops is | |
| A) Peephole optimization B) Removal of invariant computation | |
| C)Constant folding D)All of these | |
| 17. Which of the following is optimization technique used to optimize the code? | [] |
| A) Dead code elimination B)Common Subprograms | |
| C) Copy intermediate loop D) Loop Declaration | |
| 18. Live variables are used in elimination | [] |
| A)Common sub Expression B)Copy Propagation | |
| C)Code Motion D)Dead code | |
| 19. DAG is constructed from | [] |
| A)3 address code B)program | |
| C)blocks D)none | |
| 20. A Symbol table is | [] |
| A)Data structure B)Variable | |
| C)Data Type D)None | |
| 21. Input to the code generator is | [] |
| A)Source code B)Intermediate code | |
| C)Target code D)All of the above | |
| 22 is the portion of the program which will not be executed in any path of the program. | ogram. [] |
| A) Live code B) Dead Code | |
| C) reachable Code D) none of these | |
| 23. Which one is an estimate of how frequently a variable used in basic block? | [] |
| A) Usage count B)Reference count | |

]

D)Process count

24. A flow graph is a directed graph in which the flow of control information is added to_____ [

C) Program count

| | | R2 | 0 |
|---|--|----|---|
| | | | |
| A)blocks | B)graph | | |
| C)tree | D)basic blocks | | |
| 25. Basic block is Sequence of | | [|] |
| A)Statements | B)Loops | | |
| C)Values | D)None | | |
| 26. Graph coloring is strategies of | | [|] |
| A)Register allocation | B)Heap allocation | | |
| C) Stack allocation | D)None | | |
| 27. DAG representation of a basic bloc | k allows | [|] |
| A) Automatic detection of local comme | on sub expressions | | |
| B) Automatic detection of induction va | riables | | |
| C) Automatic detection of loop variant | | | |
| D) None of the above | | | |
| 28. Code generation phase converts the | einto a sequence of machine instruction | [|] |
| A) Intermediate optimized code | B) assembly code | | |
| C) target code | D) none of these | | |
| 29. If the value of the variable is chang | ed every time then that variable is called as | [|] |
| A)invarient variable | B)Dead variable | | |
| C)Live variable | D)Induction variable | | |
| 30. The strength reduction is related to |) | [|] |
| A)variables | B)Loops | | |
| C)operators | D)All | | |
| 31. DAG representation of a basic bloc | k allows | [|] |
| A) Automatic detection of local commo | on sub expressions | | |
| B) Automatic detection of induction va | ariables | | |
| C) Automatic detection of loop variant | | | |
| D) None of the above | | | |
| 32. Some code optimizations are carrie | d out on the intermediate code because (GATE 2008) | [|] |
| A) They enhance the portability of the | compiler to other target processors | | |
| B) Program analysis is more accurate | on intermediate code than on machine code | | |
| C) The information from dataflow ana | lysis cannot otherwise be used for optimization | | |
| D) The information from the front end | cannot otherwise be used for optimization | | |

| | | | | R20 | 0 |
|--------------------------|-----------------------------|-------------------------------|--------------------|--------|---|
| | | | | | |
| 33. Consider the follow | ing statements. GATE 20 | 020 | | [|] |
| I. Symbol table is acco | essed only during lexical | l analysis and syntax analysi | s. | | |
| II. Compilers for prog | gramming languages that | support recursion necessaril | ly need heap stora | ge for | |
| memory allocation in | the run-time environmen | nt. | | | |
| III. Errors violating th | e condition 'any variable | e must be declared before its | use' are detected | during | 5 |
| syntax analysis. | | | | | |
| Which of the above st | atements is/are TRUE? | | | | |
| A) I and III only | B) II only | C) I only | None of the above | e | |
| 34. Which languages ne | ecessarily need heap allo | cation in the runtime enviror | ment? GATE 200 |]OC |] |
| A) Those that support | recursion | | | | |
| B) Those that use dyn | amic scoping | | | | |
| C) Those that allow dy | vnamic data structure | | | | |
| D) Those that use glob | oal variables | | | | |
| 35. Optimization techni | ques can be applied to _ | | | [|] |
| A) intermediate code | B) final target code | C)Both A and B | D)None | | |
| 36. A graphical represen | ntation of three address of | code is called | | [|] |
| A)blocks | B)flow graph | C)tree | D)basic block | ζS | |
| 37. Any statement of co | onditional or uncondition | al statement is | | [|] |
| A) Leader | B)Follow | C)Header | D)Statement | | |
| 38. A transformation of | a program is called | If it is applied with in th | e basic block. | | |
| | | | | [|] |
| A) Live | B)Follow | C)Local | D)Global | | |
| 39. How many types of | f transformations in Princ | ciple source of optimization. | | [|] |
| A) 2 | B)4 | C)3 | D)5 | | |
| 40transformation | ons that are performed w | vithout changing the function | it computes. | [|] |
| A) Function Preservin | ng transformations | | | | |
| B) Structure- preservi | ng transformations | | | | |
| C) Algebraic- transfor | mations | | | | |
| D) All the above | | | | | |
